

# AI-Powered Receptionist for Service Scheduling in Auto Dealerships

Automate service appointments and reminders with an intelligent virtual assistant

Our intelligent virtual assistant answers incoming service calls, assists with scheduling, and sends voice or text reminders to reduce no shows. Answer every call instead losing customers to busy signals and hold times!

## Conversational AI for Service Scheduling

Leverage the power of conversational AI to answer incoming customer calls related to scheduling an appointment along with automatic text reminders to reduce no-shows. Out-of-the-box integrations with popular auto-dealer systems like Xtime and others means you can go-live in days once you choose your configurations.

The artificial intelligence has been trained to understand dealership-specific language for common services like oil change, tire service, scheduled maintenance, repairs, and more. The conversation flow is configurable and can even allow customers to request shuttle service, loaner cars, rentals, or towing assistance.

Any calls unrelated to scheduling or rescheduling are transferred to your service desk. A nominal one-time setup fee and flat-rate pricing makes it easy to calculate your return on investment.

**Reduce no-shows and customers lost to busy signals and hold times**
